

# C/S Tetras™ Clean-off Carpet Tiles Installation Instructions

## Floor Preparation

The sub floor should be level, clean, dry and should be free from grease dirt and other contaminants that will effect adhesion. If the floor is uneven a self-levelling latex skim should be applied. Any under floor heating must be switched off for 48 hours before and after installation. If the floor is dusty or absorbent it should be primed in accordance with the adhesive manufacturer's instructions.

## Installation

Tiles can be loose laid or installed with double sided carpet tape or tackifier adhesive.

### Loose Laid Tiles

Place the first tile in the centre of the matwell/mat area and build outwards to ensure that the mat is symmetrical. If required, cut tiles into shape using a Stanley knife.

### Double Sided Tape or Adhesive.

An adhesive such as F.Ball F45 (or equivalent) should be used to adhere the Tetras Tiles performance textile to the sub floor (if a release bond is required then F45 should be used in conjunction with F.Ball F2 release sealer). Using a trowel spread the adhesive evenly over an area that can be covered within the open time of the adhesive, allow the adhesive to dry to a paste like consistency. Tetras Tiles should be conditioned at room temperature before installation.

Place the first tile in the centre of the matwell/mat area and build outwards to ensure that the mat is symmetrical. If required, cut tiles into shape using a Stanley knife.

Avoid walking on the tiles until a full bond is achieved, normally 24 hours.

All aspects of the installation should be in accordance with the requirements of BS5325:2001

## Colour Options

**SmokeyQuartz**  
Z3711

**Moonstone**  
Z3710

**Obsidian**  
Z3709
